Education

- **Indian Institute of Information Technology, Lucknow** Uttar Pradesh
  Bachelor of Technology - Computer Science, ***CGPA: 8.05****;* *Nov 2022 - June 2026*
  Coursework: Data Structures and Algorithms, OOPS, Operating Systems, DBMS.

Work Experience

Coupang, India — Software Development Engineer Intern Hyderabad, India
Technologies: Java, Spring Boot, CircleCI, Docker, Kafka, API Gateway(Pylon), Redis *June 2026 – Present*

- Built a secure PII data pipeline across two microservices to protect customer shipping information - generating short-lived signed access tokens, retrieving and masking recipient names and addresses via an internal token service, and storing private keys in HashiCorp Vault with access controlled through a company security portal.
- Replaced fragile direct HTTP calls with a standardized API Gateway SDK (Pylon) for invoice format fetching in the shipping label service & Reduced production deployment time from 16 mins to under 5 mins by setting up emergency CI/CD pipelines across 5 services

QiCAP.Ai(HFT), India — Software Development Engineer Intern Bengaluru, India
Technologies: Python, FastAPI, React, TypeScript, PostgreSQL, Ansible, XML, Linux *February 2026 – June 2026*

- Built a full-stack internal platform to auto-generate and remotely deploy exchange-specific XML configurations (CTCL adapters, Hellfire, HF Engine) for low-latency trading infrastructure on Linux servers, replacing manual TradeOps workflows with one-click config generation and Ansible-based deployment via SSH.
- Implemented role-based access control with maker-checker approval workflows, Excel-to-DB client synchronization, config generation history with audit logging, and dynamic gateway adapter management enforcing throttling limits, terminal ID validation, and standardized credential paths.

Groww, India — Software Development Engineer Intern Bengaluru, India
Technologies: Java, SpringBoot, SpringBatch, Kubernetes *July 2025 – January 2026*

- Built and maintained Java Spring Boot microservices and Spring Batch pipelines on Kubernetes for large-scale financial workflows across trading, demat, and funds systems& Wrote unit tests using JUnit and contributed to UAT and release testing, ensuring correctness and stability of backend services before production deployment.
- Improved reliability of batch pipelines by implementing retries, failure isolation, and idempotent processing, reducing production failures and ensuring consistent execution and designed and validated DAG-based batch workflows using Kubernetes CronJobs, ensuring fault-tolerant and predictable job execution.

Projects

- **AIChatX** JavaScript, Node.js, React.js, Express.js, MongoDB, Gemini AI, Socket.IO, JWT, Linux.
  - Built a full-stack, real-time chat platform using **Gemini conversational AI** with JWT-based security and responsive **WebSocket** communication over **TCP/IP**, leveraging distributed system design principles and MongoDB for scalable, low-latency information retrieval.
  - Designed a secure **compiler module** that internally spins up **Node.js servers**, enabling real-time code execution directly within the web interface.

Roles And Achievements

- **Expert on CodeForces** (Max Rating:1669). CodeForces
- Awarded **4 Star** on Codechef (Max. Rating: 1840). CodeChef
- **Knight** on **Leetcode** (Max Rating:1923). Leetcode
- Runner up at **Hack-O-Fiesta(V4)** Hackathon, IIIT Lucknow.

Skills

- **Languages**: C++, Java, Python, Go, Rust, JavaScript, SQL, C.
- **Framework**: SpringBoot, SpringBatch, React.js, Node.js, Flask.
- **DevOps & Orchestration**: Docker, Kubernetes, CI/CD.
- **Backend & Systems**: REST APIs, Distributed Systems, Scalable Systems, Fault Tolerance, Idempotency.
- **Databases**: MySQL, PostgreSQL, MongoDB, Firebase.
- **Testing & Quality**: Unit Testing (JUnit), Validation, Debugging, Production Monitoring.
